

Artwork/Project Title

SkinQuo

Year Accomplished

2026

Role/Position

UI/UX Designer & Front-End Developer

Summary

A web-based skincare recommendation platform that helps users discover products tailored to their skin concerns using recommendation algorithms and ingredient analysis.

Project Type

Group Project - 5 Member
PBL (Project Based Learning) - Semester 6 Assignments

Problem

Many people struggle to find the right skincare products because of the sheer number of options available, unfamiliar ingredient names, and lack of personalized recommendations.

Solution

We developed a recommendation platform that utilizes Content-Based Filtering (CBF) and the Simple Additive Weighting (SAW) method to provide personalized skincare recommendations. The platform also offers ingredient information, warnings, and recommendation explanations.

My name

Pandya Cahya

My Contribution

- Conducted UI/UX research and designed user flows.
- Created wireframes and high-fidelity prototypes using Figma.
- Designed responsive user and admin interfaces.
- Implemented front-end pages with a focus on usability and consistency.

Impact

The platform simplifies the skincare selection process by helping users understand products and make informed purchasing decisions based on their individual needs.

What I Learned

I learned how recommendation systems can be transformed into user-friendly experiences and how UI/UX design can improve user trust when interacting with data-driven systems.

Year Accomplished

2025

Role/Position

Flutter Developer & Firebase Developer

Summary

A mobile application designed to streamline event management and participant attendance tracking using QR Code technology.

Project Type

Group Project - 5 Member
PBL (Project Based Learning) - Semester 5 Assignments

Problem

Manual event attendance management can be time-consuming, error-prone, and difficult to manage for large numbers of participants.

Solution

We created a mobile application that allows administrators to manage events, record participant attendance through QR Codes, and store attendance history digitally.

My Contribution

- Developed a CRUD feature for event data on the admin page to simplify event management.
- Implemented a CRUD feature for event images by integrating Cloudinary and Firebase services for efficient media storage and management.
- Assisted in improving and enhancing the user interface on the user and admin pages to enhance user experience.

Impact

The application reduces administrative workload and improves attendance recording accuracy through digital processes.

What I Learned

I learned how to develop scalable mobile apps using Flutter, Firebase while working in a collaborative development team, and I learned how to integrating Cloudinary for storing images with Firebase

Noicetraction

Year Accomplished

2025

Role/Position

UI/UX Designer & Full-Stack Developer

Summary

A web platform that helps users create personalized ambient soundscapes for studying, working, relaxing, and sleeping.

Project Type

Group Project - 2 Member
Holiday project with my brother

Problem

Many people have difficulty maintaining focus, reducing stress, or improving sleep quality because of distracting environmental noise.

Solution

We designed a platform that enables users to mix natural sounds and traditional Indonesian musical instruments to create customized audio environments.

My Contribution

- Designed user flows, wireframes, and prototypes in Figma.
- Conducted design revisions based on evaluation results.
- Implemented the design into a functional web interface.
- Collaborated with team members during development.

Impact

The platform provides users with a customizable and culturally inspired tool to improve concentration, relaxation, and overall well-being.

What I Learned

I learned a lot, from creating wireframes and prototypes in Figma, learning how to implement designs into websites (HTML), and getting feedback from users.

Artwork/Project Title

Soil Moisture Monitoring Website

Year Accomplished

2026

Role/Position

Full-Stack Developer & IoT Integration Developer

Summary

A web platform that helps users create personalized ambient soundscapes for studying, working, relaxing, and sleeping.

Project Type

Group Project – 3 Member
Final Assignment My friend

Problem

Farmers often rely on manual observation to determine soil conditions, leading to inefficient water usage and delayed irrigation decisions.

Solution

We built a real-time monitoring system that collects soil moisture data using sensors connected to ESP32 devices and synchronizes the information through Firebase to a web dashboard.

My name

Pandya Cahya

My Contribution

- Developed the website.
- Designed and managed the database structure.
- Integrated ESP32 devices with Firebase.
- Implemented real-time monitoring and control functionality.
- Tested and maintained system communication between hardware and software.

Impact

The system allows users to monitor soil conditions remotely and make more informed irrigation decisions, improving water efficiency.

What I Learned

I learned how to integrate hardware like ESP32 with firebase services and gained practical experience in building real-time IoT systems.

Artwork/Project Title

Pump Monitoring Website

Year Accomplished

2026

Role/Position

Full-Stack Developer & IoT Integration Developer

Summary

An IoT-based monitoring and control system for tracking electrical parameters and controlling pump operations remotely.

Project Type

Group Project - 3 Member
Final Assignment My friend

Problem

Monitoring pump systems manually makes it difficult to identify operational issues quickly and increases the risk of downtime.

Solution

We developed a web platform that displays real-time voltage, current, power consumption, and valve status data while allowing users to remotely control system components.

My name

Pandya Cahya

My Contribution

- Developed the full-stack website.
- Designed and maintained the Firebase database.
- Integrated ESP32 devices for sensor communication.
- Implemented real-time synchronization and monitoring features.
- Supported testing and deployment processes.

Impact

The system improves monitoring efficiency and enables faster responses to operational issues through remote access.

What I Learned

I learned how to manage communication between embedded devices and firebase platforms while maintaining reliable real-time data synchronization.
